

ROOMFLOW

Stripe Payments Guide

Plain-English guide to Stripe payments and connected accounts.

Status: Pilot Version - 2026

1. Overview

RoomFlow uses Stripe and Stripe Connect to support secure guest payments and connected account payout setup. Stripe is a payment infrastructure provider used by many online businesses. RoomFlow does not store guest credit card numbers.

2. Connected Accounts

A participating property may connect a Stripe account during setup. This allows payments and payouts to be routed according to the connected account configuration and Stripe's requirements.

3. Guest Payment Flow

- A guest scans a room QR code.
- The guest selects a tip amount.
- A processing fee may be included so the selected tip can be preserved for the housekeeping or cleaning team.
- The guest completes payment through Stripe Checkout.
- RoomFlow records transaction metadata for reporting.

4. Processing Fees

Processing fees may vary based on payment method, geography, card type, or Stripe pricing. RoomFlow may calculate a processing fee at checkout so the selected tip amount remains intact for the intended team.

5. Payout Timing

Payout timing is controlled by Stripe and the connected account's settings, verification status, risk review, and applicable processor rules.

6. Card Data

RoomFlow does not store guest card numbers or sensitive payment credentials. Stripe handles payment collection through its secure payment tools.

7. Stripe Terms

The Property and connected account users may be required to accept Stripe's applicable terms, including Stripe's Connected Account Agreement. For current Stripe legal terms, visit stripe.com/legal.

8. Support

For RoomFlow implementation questions, contact info@roomflowhq.com. For Stripe account-specific questions, the connected account holder may need to access Stripe support directly.

Note: This template is provided for operational readiness and should be reviewed by qualified legal, tax, and payments counsel before broad commercial use.
